GIVE THE GIFT OF A BRIGHTER FUTURE TO YOUR CHILD NOW!

WHY PEL PROGRAM?

PEL is a character transformation program that helps students reach their full potential. PEL combines an educational philosophy with time tested principles of learning and instruction. Lessons are individualized and students' progress are carefully observed and monitored to maximize learning. PEL builds success skills in the classroom and in life. The program helps your child achieve more than they can imagine.

BENEFITS of the PEL PROGRAM

- Building a strong foundation
- Strengthening focusing skills
- Developing self-confidence
- Fostering independent learning skills
- Enhancing time management skills
- Developing organization skills
- Strengthening study habits
- Empowering problem solving
- Building analytical skills
- Developing critical thinking skills
- Empowering persistency
- Maximizing students' potential

3 PHASES of LEARNING

1. ANALYTICAL PHASE – THE WHY AND HOW

The curriculum is structured, sequential, and cumulative. Every concept is divided into its parts. Parts are sequenced, modeled and illustrated. PEL students are taught to analyze each part. The process enhances critical thinking.

2. PRACTICE PHASE – PRACTICE TO THE POINT OF MASTERY

Basics are practiced until they become second nature, so memory bandwidth is available for second and third-order sub-skills. PEL worksheets are designed for daily practice, and the just-right level helps to improve skill, automaticity and self-confidence.

3. TIME MANAGEMENT PHASE

PEL students are taught deliberate practice with the specific goal of improving focusing skills and performance.

MATH

PEL features the Singapore Math approach. It focuses on mastery, not rote memorization, where layered strategies build upon one another. Concept or the “why” is introduced in pictorial representations, which help students form a mental image of the mathematical concept. This is followed by the “how” stage, where students solve problems using numbers and symbols. This approach makes the learning of mathematics fun and meaningful, and helps students develop positive attitudes toward math.

ENGLISH LANGUAGE ARTS

Components of the program include literacy appreciation, grammar, vocabulary and mental actions for comprehension. Study materials are engaging and motivating. They feature renowned literature and topics relating to geography, history and science. In reading comprehension, students learn to observe, interpret, summarize, evaluate and apply what they read. Vocabulary is covered explicitly and through prefixes, suffixes, root words, synonyms, antonyms, context clues and homophones.

The program incorporates logical thinking, precise selection and correct ordering of words, sentence and paragraph construction and summarization to enhance writing skills.

PRIVATE TUTORING

For students who need extra dedicated help to catch up with school work in addition to rebuilding core skills.

AFTER SCHOOL HOMEWORK HELP

For students who need extra guidance with challenging school homework.

PHONICS

Features the Spalding – “The Writing Road to Reading” Method. Instruction is explicit, interactive, diagnostic, and multisensory. Students see, hear, say, and write using all channels of the brain to enhance retention. The program explicitly and systematically teaches the letters and letter combinations (phonograms) that represent speech sounds. Students learn to spell words by applying phonograms and the twenty-nine English Language rules that govern pronunciation, spelling, and language use. Students also practice reading story books to enhance fluency.

THE PEL INSTRUCTOR

- Guides, models, coaches and provides support as needed
- Encourages and motivates your child to his/her full potential
- Provides careful and continuous observation of your child's progress to meet his/her needs
- Ensures maximized learning
- Sets goal with your child

PEL instructor is ever ready and available for regular conference with you to ascertain goals, advancement, and to accelerate progress of your child.

SUCCESS STORIES

- “The program taught me self-discipline, has given me a head start and be advanced in my Math and English in school. The greatest gift of the program, however, is how it taught me to learn on my own. It allowed me to understand concepts that would normally have to be taught by teachers and thus gave me a huge advantage in school. PEL also showed me that I was capable of anything if I set my mind to it. Originally, Math was not my strong subject, however, because of PEL, I rose to the top of class after a lot of hard work.”
~ **MICHAEL**
- Having my two children enrolled in PEL Learning Center has been the best thing that I have done for them. The passion and commitment that directors in making sure that students reach their potential is admirable. The director and team of staff have changed and shaped my children's life by fostering great habits, self-confidence and self-esteem. I have tried other programs which I thought was alright until I join PEL and saw a huge improvement in their math and reading. I noticed a big improvement in just a six months period. I truly recommend PEL if you are looking to do something that make a difference in your children's life and help them reach their full potential.
~ **ARLENE M.**
- Over the last couple of years, researchers have conducted a number of studies, comparing classes with Singapore math curriculum to those, which apply other methods, traditional or innovative. All of those studies showed that the implementation of Singapore math has a positive effect on students' skills. Even if the Singapore math method was used only for a limited period of time, one year or several weeks, the results exceeded expectations.
